

# Population of Albania

**1<sup>st</sup> January 2022**

**Tiranë, on 15<sup>th</sup> April 2022:** The population of Albania on 1<sup>st</sup> January 2022 is 2,793,592 inhabitants, experiencing a decrease by 1.3 % compared to 1<sup>st</sup> January 2021.

During 2021 the natural population increase (births-deaths) was -3,296 inhabitants, marking for the first time negative natural increase.

The number of immigrants in the year 2021 was 9,195 persons and the number of emigrants was 42,048 persons.

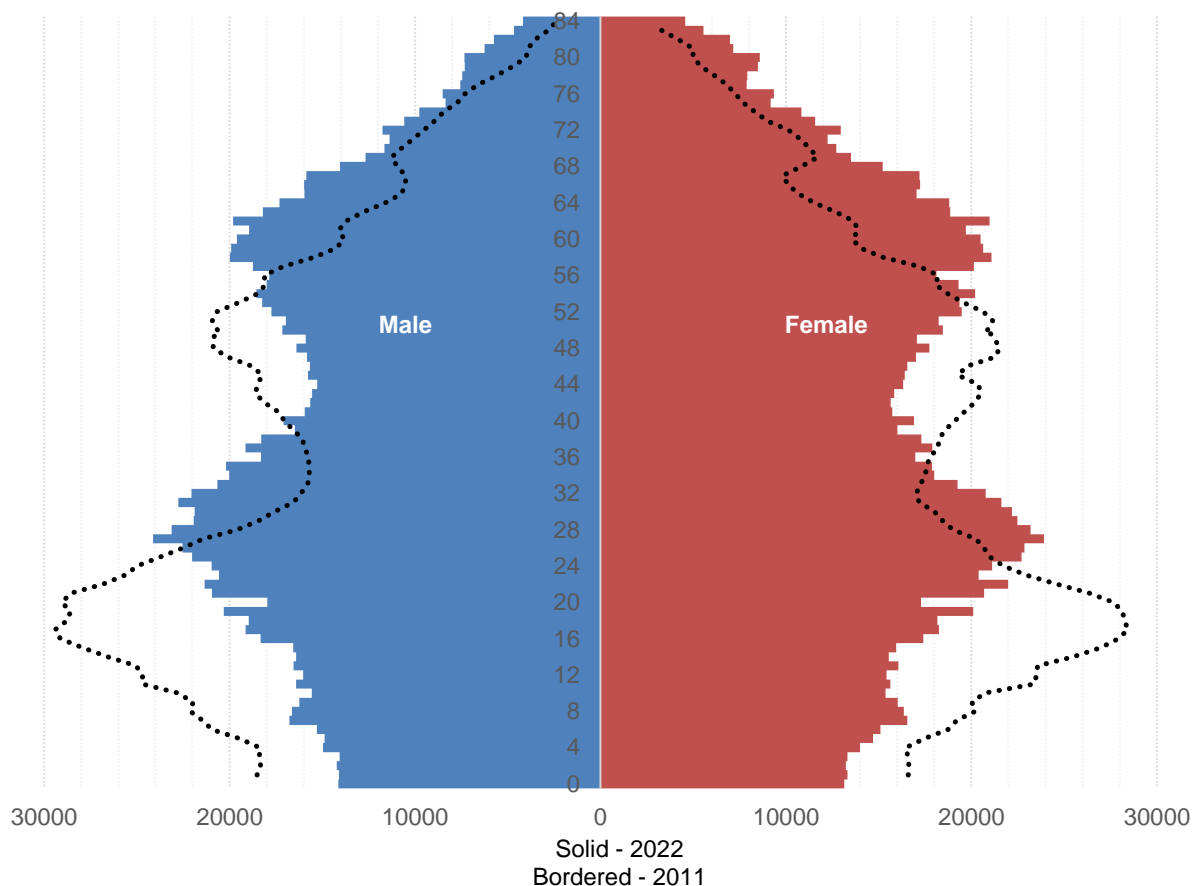

Net migration (the difference between immigrants and emigrants) experienced an increase in absolute value, compared to the previous year: from -16,684 to -32,853 inhabitants in 2021.

Continues

Fig. 2 Population pyramid on 1<sup>st</sup> January 2011-2022

On 1<sup>st</sup> January 2022 the median age of population results 38.2 years old from 37.6 that was on 1<sup>st</sup> January 2021.

On 1<sup>st</sup> January 2022 the youth dependency ratio (ratio of the number of persons under working age 0-14 with the number of persons of working age 15 to 64) has decreased compared to 1<sup>st</sup> January 2021: from 24.2 % to 24.0 %, while the old dependency ratio (ratio of the number of persons above the working age 65+ with the number of persons of working age 15 to 64) has increased: from 22.3 % to 23.1 % during the same period.

Sex ratio of total population on 1<sup>st</sup> January 2022 has decreased compared to 1<sup>st</sup> January 2021: from 99.3 to 98.6 males for 100 females.

Sex ratio at birth has increased, marking 107.5 in 2021, from 106.6 which was in 2020.

During the year 2021 there were born 27,284 babies, experiencing a decrease by 2.8 % compared to the previous year. The number of deaths in 2021 was 30,580 persons, experiencing an increase by 10.8 % compared to the previous year.

Fig. 3 Births and deaths in Albania

In the year 2021 the number of emigrants was 42,048 persons and the number of immigrants was 9,195 persons.

Fig. 4 Emigrant, immigrant and net migration

**Tirana, Durres and Fieri have the highest weight in the total population.**

On 1<sup>st</sup> January 2022 Tiranë prefecture occupies around 32.9 % of total population, continuing to be the most populated prefecture in the country, followed by Durrës and Fier with 10.4 % and 10.0 % respectively. Regarding the other prefectures, five of them occupies respectively from 2 % to 5 % of total population.

**Fig. 5 Population by prefecture on 1<sup>st</sup> January 2022**

**On 1<sup>st</sup> January 2022 population was increased only in one prefecture of the country**

Estimates of population on 1<sup>st</sup> January 2022 shows that only one prefecture of the country experienced a population growth compared to the previous year, while eleven of them experienced a decrease. The increase was observed in Tirana (+0.8 %).

On the other hand, the largest decreases of population were observed in Gjirokastrë (-4.7 %), Berat (-3.7 %) and Dibër (-3.6 %).

Prefecture with the highest youth dependency ratio is Kukës (33.5 %), which also results as the prefecture with the highest old dependency ratio (26.2 %), followed by Lezha prefecture with (26.1%).

# Methodology

## Cohort component method

Annual population estimates are based on cohort component method. This is a standard demographic method, which uses various data sources for the main components of population change. The main components of population change are summarized as follows:

### 1. Natural Increase (births and deaths)

As the starting point population was considered the resident population on January 1<sup>st</sup> of the previous year. Births by during the 12 months period were added to this population while deaths by age, sex and prefecture were subtracted respectively.

### 2. Net Migration

International movements (international migration: people who enters and leave the country) are the most difficult component to measure, as a population register does not exist in Albania yet. In this way we use the best 'proxy' data to measure migration, based mainly on data collected from the Migration Module of the Labor Force Survey, combined with population projection rates 2011-3031.

### 3. Births

*The population change due to births.*

The live births that occurred during 1<sup>st</sup> January to 31 December of the previous year are added to population aged zero by sex and disaggregated by prefecture of the civil office where the birth was registered.

#### *Birth data*

Birth data by sex is provided by the General Directorate of Civil Status, which sends to INSTAT only the number of births of the residents in Albania. All births of Albanian residents are considered during the reference period, by not taking into account the births of residents outside Albania (emigrants), even though they may be registered in the civil status offices, near their former settlements.

#### *Late registered birth*

A small adjustment is made in the number the number of the late registered births for the actual year, in order to include all occurred births in a reference period. The number of late registered births, in the previous year are considered as proxy for late registration of the actual year, considering the assumption (as a result of our continuous analyses) that the number of late registered births does not change a lot from year to year.

#### 4. Deaths

##### *The population change due to deaths.*

Registered deaths in Albania from 1<sup>st</sup> January to 31 December of the previous year are subtracted from the population by sex, age and prefecture of residence.

##### *Death data*

Data for deaths are provided by the General Directorate of Civil Status, by main demographic characteristics. We take in consideration all deaths of Albanian residents during a reference period, by not taking into account the deaths of residents outside Albania (emigrants), although they may be registered in the civil status offices near their former settlements.

##### *Late registered death*

We make a small adjustment in the number of the late registered deaths for the actual year, in order to include all occurred deaths in a reference period. The number of late registered deaths in the previous year are considered as proxy for late registration of the actual year, considering the assumption (as a result of our continuous analyses) that the number of late registered deaths doesn't change a lot from year to year.

#### 5. Internal movements

The internal movements, inside the territory of the country, are also provided yearly by the General Directorate of Civil Status. The data received contains all the internal movements of the population, including the change of residence (prefecture) reflected in the destination civil office of the person. Internal movements of the persons which are not registered in the respective civil offices in the destination prefecture are not considered.

## DEFINITION

**Resident population:** is based on the concept of usual residence. According to this definition in the resident population of one year are included all those persons who lived or have the intention to live for at least 12 months in the country, regardless of nationality.

**Median age:** age in which the half of population is older and the other half is younger.

**Population growth rate on 1<sup>st</sup> January:** It is the ratio of total population growth over a year as a result of its natural growth and net migration, compared to a year ago, expressed as a percentage.

**Age dependency ratio:** It is the ratio of persons aged 0-14 years and 65+ years to the working age population 15-64 years.

**Youth dependency ratio:** Ratio of the number of persons under working age (0-14 years of age) with the number of persons of working age (from 15 to 64 years of age).

**Old dependency ratio:** Ratio of the number of persons above the working age (65+ years of age) with the number of persons of working age (from 15 to 64 years of age).

**Sex ratio:** Ratio of the number of males to the number of females, in a given period of time, usually expressed as number of males for every 100 females.

**Sex ratio at birth:** Ratio of the number of males, to the number of females, born in a given period of time, usually expressed as number of males for every 100 females.

**Natural increase in population:** The difference between the number of live births and the number of deaths during in a given period of time.

**Net migration:** is the difference between the number of immigrants and the number of emigrants of a population, in a specific territory, in a given period of time (I-E)
